Learn More To download Nero Burning ROM 2.5.1.11295, please select from the options below.

```
package failer import ( "fmt" "strings" ) // Translator is a function that takes a string, escapes it for errors, // and returns a new string. // // It does this by taking the first character of the string (which is not // a special character in Go, so we can use it as an indicator for a // character) and then appending an escape sequence to it that alters it // as appropriate (see below). // // The caller can then construct a Go representation of this error and // pass it to either of the error methods: // // GVKer(fmt.Errorf("fatal error: %c, %s", 'A', "foo"), "a") // GVKer(fmt.Errorf("fatal error: %c, %s", 'A', "foo"), "foo") // // This will get translated by the Translator function and then be // wrapped in the top level message (the first argument) in either of the // two ways. // // If an error is wrapped, the message
```
