# Arcsoft Totalmedia 35 Key Keygen 53

Category:2010 software Category:Discontinued products Category:Digital audio editorsQ: Bash: Error with 'directory name with spaces in path I have been using the following script to copy a directory:  
SOURCE="\$1" TARGET="\$2" DEST\_DIR="\$(mktemp -d)" DEST\_DIR\_NAME="{DEST\_DIR#HOME}" cd "\${DEST\_DIR}" if [! -d "\${TARGET}" ]; then echo "Destination directory doesn't exist: \$TARGET" exit 1 fi cp -r "\${SOURCE}" "\${DEST\_DIR\_NAME}" if [ \$? -ne 0 ]; then echo "Error: Can't copy \$TARGET into \$DEST\_DIR." exit 1 fi cd - rm -rf "\${DEST\_DIR}" When I run it, it fails because the directory name has spaces. How do I escape it? A: To quote from the manual: A filename with the character sequence '\$\r' in it shall be considered to have an embedded '\$\r', and a file name starting with '\$\x0d' (which is usually written as ^M) is an error; the ^M is left unquoted so that it is treated literally. In other words, the following won't work:  
DEST\_DIR\_NAME="{DEST\_DIR#HOME}" The reason you have such a string in the first place is that the path contained spaces, which Bash allows to be written in the correct way. Q: Unable to add polygon shapefile using PyQGIS I have a shapefile of China, which has a different polygon shape for different countries like: I am trying to add this shapefile in PyQGIS using the below command:  
addlayer = QgsVectorLayer("/home/Sikar/shapefile/China.shp", "China", "ogr") QgsMapLayerRegistry.instance().addMapLayer(addlayer) but I get the following error: AddLayer:  
F:/Users/Shweta/Downloads/
