Selective reuptake inhibitors (SRIs) of serotonin are a new group of drugs, currently licensed for the treatment of major depression and/or anxiety disorders. Nevertheless their use has recently increased for the treatment of obsessive compulsive disorder (OCD). This article is a critical review of the SRI use in OCD. Main review articles and original articles were selected. The use of the SRIs in the treatment of OCD represents a small proportion of the published literature. Nevertheless, a few studies have demonstrated their efficacy and tolerability. A meta-analysis of the effects of SRIs in OCD have reported a significant improvement of obsessive and/or compulsive symptoms (for all SRIs). The results of all SRIs appear to be superior to those of conventional treatments. The specific efficacy of SRIs remains unclear and the control groups in most studies are heterogeneous. More studies are needed to better determine the efficacy of SRIs in OCD. Moreover, the efficacy and tolerability of SRIs in comorbid disorders have not yet been investigated. Some cases of erythema nodosum following the injection of Antilyse 7.4 (Actilyse). Erythema nodosum is a rare complication of Antilyse 7.4 (Actilyse) therapy. In some cases the rash may be severe and treatment may be needed. We describe five patients who had developed erythema nodosum following the injection of Antilyse 7.4 (Actilyse). All patients had previously responded to a standard dose of Antilyse 7.4 (Actilyse) and were subsequently treated for a recurrence of symptoms. They received a second dose of Antilyse 7.4 (Actilyse) and developed a maculopapular rash which was indistinguishable from erythema nodosum. We suggest that erythema nodosum may be due to vasculitis occurring as a complication of the vasodilatory therapy. It is important to exclude a diagnosis of systemic lupus erythematosus, because there is a high morbidity and mortality associated with this condition. Patients should receive treatment for both their acute condition and for vasculitis and should be monitored 2d92ce491b
