Station code using Capstan I am using Capstan 2.0.0. I have an application which has three
components: Identity Workflow (in which I will use Bean Station) I am using capstan
generate command to generate code: capstan generate workflows --from workflow.beam
--to beam --with enterprise I have an issue with the Bean Station code. For example, I want
to generate the bean station function "com.petclinic.workflow.CreatePurchaseOrder". I run
the capstan generate command, and it works fine, and the Bean Station code is generated in
the "modules/com/petclinic/workflow/CreatePurchaseOrder.beam" file. But when I import
this module to the identity module, the package "com.petclinic" cannot be resolved and the
"com.petclinic.workflow.CreatePurchaseOrder" fails to compile. I have checked all the
dependencies in both the Identity and the Workflow modules. Could anyone let me know
how to fix this? A: I have fixed this issue by adding an extra dependency in my Identity
module like this: dependencies { compile('org.beanstalk:beanstalk-
core:3.0.6:jar:2.0.0-M3') } I changed "2.0.0-M3" to "2.0.0-M4". As I am using Corda
version 3.0.5, it is 3.0.6, by the way. 35---C36---N3 -178.7 ba244e880a
