And suppose that $\theta\in(0,\pi)$. I am trying to show that it holds $$r\le\sqrt{2\cos\left(\frac{\theta}{2}\right)}$$ by using the triangle inequality. How do I prove this? A: The angle is $\theta$ in the triangle Oppositely, the distance from the point to the line is: $$r=\sqrt{(x-x_0)^2+(y-y_0)^2}$$ That is $r=\sqrt{(x-x_0)^2+(y-y_0)^2}$. Another way is to get the distance from the center of the circle is the distance from the point to the line is: $$r=\frac{|(x-x_0)^2-(y-y_0)^2|}{2\times\sqrt{(x-x_0)^2+(y-y_0)^2}}$$ So in your case: $$\begin{align} r&=\frac{|(x-x_0)^2-(y-y_0)^2|}{2\times\sqrt{(x-x_0)^2+(y-y_0)^2}}\\&=\frac{|x-x_0|^2-|y-y_0|^2|}{2\times\sqrt{|x-x_0|^2+|y-y_0|^2|}}\\&=\frac{|x-x_0|^2-|y-y_0|^2|}{2\times\sqrt{|x-x_0|^2+
