I am using Windows 7 ultimate, Java 1.6.0\_12, and Eclipse IDE 4.2.1 (Kepler). I have also tried using a blank template. I've also tried changing the canvas size, but none of the buttons I have made appear. A: I'm assuming you mean to include the buttons on your main canvas so that you can 'draw' to them. You need to add the following code to your draw() method. `graphics.drawRect(bounds, Color.BLACK); graphics.drawRect(bounds, Color.WHITE); graphics.drawRect(bounds, Color.MAGENTA); graphics.drawRect(bounds, Color.YELLOW); graphics.drawRect(bounds, Color.RED); graphics.drawRect(bounds, Color.BLUE);` You can adjust the color of the button via the RED, YELLOW, BLUE, MAGENTA, WHITE etc. parameters. I've just worked through the tutorial using your code. I presume that you have a similar block of code that is only concerned with the drawing? If this is the case, it shouldn't be much work to modify it into a proper `addButton()` method.

A team of US soldiers found themselves unprepared for a surprise attack while on patrol in Afghanistan when they were suddenly peppered by a hail of bullets from a group of children. The attack happened in 2012 and happened to several members of the elite unit at the time – the 160th Special Operations Aviation Regiment. Some of the soldiers were taking cover when they were shot at by a group of children. Incredibly, even though several of them were hit by bullets from rifles, none of them were hit and their small arms ammunition has been destroyed by the bullets from the shrapnel, the Daily Mail reports. And the soldiers didn't have much left in the way of weaponry. “They took position with small arms and M-4s,” said Staff Sgt Ryan Dillon, spokesman for the 160th. “And then they were fired upon at very close range.” “They were at a dead run,” said Dillon. “They did everything they could. They threw everything they had at that location.” “It was definitely not pre-planned,
