Contents What is Photoshop? Photoshop, as the name suggests, manipulates images. It can work with and manipulate every format of image — from pure raster formats like PNG (Portable Network Graphics) and TIFF (Tagged Image File Format) to vector formats like EPS and SVG. It can even process video. With the latest CS6 edition, Photoshop is a true

desktop-class product, with a professional-grade user interface and a large number of features, including the ability to perform live-preview edits. With the program's emphasis on ease-of-use, users are encouraged to customize their workflow by creating their own tools. With the introduction of Actions, PS provides a powerful set of production and post-production tools. Images exported from Photoshop can be easily shared

on web pages thanks to built-in web export. PS allows users to create, edit and modify raster and vector images, as well as insert images, draw guides and paths, use masks and apply effects, including those from presets and actions created in the program. There are more than 60 effects available in Photoshop, including lens flare, distortions, filters, effects for lens, lens hood, flash, paint brushes, and stamp effects. More than 5,000

actions are available. Major features of Photoshop Adobe Photoshop CC contains many features that are available with previous versions of Photoshop. They are explained here: Raster Editing Photoshop is a raster-based product. Images are "corrected" by darkening or lightening them, or by blurring or sharpening them, depending on your needs. For more complex needs, you can use layers to apply the necessary effects at

once to the part of the image you want to modify. The following figure illustrates how you can manipulate a raster image. With a little practice, users of Photoshop can manipulate rasters with ease. Raster Editing Rasters With the exception of JPEG, all pictures and photos are rasters — two-dimensional grids of pixels. Adobe uses the term "raster" to describe images that are in the pixel-based format, or what's sometimes called the

"pixel map." In the pixel map, each pixel stores a single value, a grayscale value that indicates the intensity of the color in that particular location. Digital cameras and scanners can record a pixel map by digitizing and encoding each pixel

What's New in the?

Ford said Tuesday that the company is recalling 336,000 small SUV and crossover vehicles due to a faulty airbag inflator. The recall comes a year and a half after a crash involving

an Explorer caused the death of a mother who was a passenger in her SUV's front passenger seat and injured her infant daughter. The recall also includes four of Ford's most popular small SUV models. The vehicles are equipped with airbags that may deploy with an excessive rate of force because an electrical switch module, called a resettable fuse, needed for the normal operation of the airbag is not working. The switch module

is designed to prevent short circuits or electrical overcurrents that could damage the vehicle and void the warranty. If it fails, the airbag could deploy and cause injury or death. Ford says the switch module is at the front of the switch module. The switch module can be reset, which may have caused the airbag to deploy due to the accumulated heat and voltage. The automaker is notifying owners by letter. If the airbag deploys in a crash, Ford

recommends that passengers wear seatbelts. The automaker said there have been no accidents or injuries due to the defect. Ford said it will notify owners of any repairs required. Owners will be given a schedule of the repairs they may need to perform, and once they are completed, Ford will post a bulletin on its website. Ford said it sent letters to all 594,000 owners of the vehicles affected on Feb. 14. Owners were able to make appointments

to have their vehicles repaired. As of April 13, approximately one-third of owners had their vehicles repaired. As part of the recall, Ford has offered to reprogram the airbag control module free of charge. The company says it was cooperating with the National Highway Traffic Safety Administration. "While this vehicle is equipped with a resettable fuse, the vehicle's airbag system has been designed to function in a way

that is not affected by this defect," Ford said in a news release. Ford said the airbag systems in the four vehicles affected are common in the industry. In 2016, the company recalled 225,000 small SUV and crossover vehicles after a crash in which the airbag helped fatally injure two children. At the time, Ford called it the largest recall related to a vehicle's airbags in U.S. history.Q:
