By PeterB Date Added: 04/11/2005 Mail Peek is the best and most powerful free email checker out there. I recommend it to everyone. Even my mother uses it. I actually had a conversation with my mother about this program, and she was kind of impressed by the program. It's very easy to use, and also easy to use all by yourself (she can't figure out how to use Outlook Express even, and I happen to know she's a pretty good computer user). I recommend it. This one is simple and fast. I even wish this is a full software! However, I use many e-mail clients like Thunderbird and claws. I dont want to pay for a email client, even if it is for Linux. The price is right! By Anonymous Date Added: 03/11/2005 My mail still arrived but I couldnt retrieve it. I contacted the author at support.mailpeek.com and they told me to contact the service provider of the hosting company. They told me I should contact my provider to let them know. I contacted the provider they told me it was ok, as long as I sent them the message with the headers. I sent a message with the headers and the status was Unavailable. I contacted the author again and he said they would do some further checking and see if I can get my mail or not. Hopefully my mail will be retrieved.[Bacteriological and clinical aspects of gonococcal infections (author's transl)]. Gonococcal infections in the human genito-urinary tract are not well known. The authors performed a prospective study including 162 patients with Neisseria gonorrhoeae infection in order to clarify the pathogenesis, clinical aspects, diagnostic problems and therapeutic failures. The diagnostic of infection was made by electron microscopy, isolation of Neisseria gonorrhoeae and/or cultures in Bordet-Gengou's medium. In the gonococcal infection, 70% of patients presented clinical manifestations of urethritis with a high rate of urethral involvement. The pathogenesis of the infection seems to be related to the diffusion of the microorganism through the cervix and into the urethra. The rate of disseminated infection is estimated to be around 11% and, in these cases, chances are rarely found. The therapeutic failures are due to the early resistance of N. gonorrhoeae to pen 77a5ca646e
