AutoCAD History Starting in the late 1960s and early 1970s, a great number of companies were working on CAD systems that were eventually released in the mid to late 1970s. The most widely used commercial CAD systems were the following: Drawing Systems: Concrete Systems: Convolve Systems: Eagle Systems: Guidance Systems: Industry Systems: Luminar Systems: Mathematics Systems: Matronics Systems: Militello Systems: Moline Systems: Pro CAD Systems: Raster Systems: Sumitomo Systems: Symbol Systems: Textile Systems: Time Systems: Vector Systems: Vector Plus Systems: Vector Systems: The first commercially available microcomputer CAD system was released by Ortho-Graphics in 1977. In 1979, After a number of unsuccessful attempts, IBM chose to release a Micro BASIC version of their operating system, called DOS, for sale, which was later dubbed PC DOS. This operating system allowed PCs to emulate a mainframe computer. In 1980, a new operating system, MS-DOS, was released. A year later, a new microcomputer with an integrated graphics controller, the Intel 8088-based IBM PC, was released by IBM. The PC provided enough graphics resources to run an "acceptable" program like a CAD system. In 1981, the first commercially available CAD software was released by Adobe Systems, in a version of Display PostScript for the IBM PC. This version was a bitmap graphics editor that replaced text, but was still not a CAD system. In early 1982, a new graphics system, PostScript Level 2, was released by Adobe Systems. This new version was a vector graphics system, which had more than twice the graphics resolution of the previous version. In late 1982, Autodesk was formed when a number of companies merged into a single entity. In early 1983, the company released a PostScript-based vector graphics system, AutoCAD, to the public. AutoCAD introduced the concept of a "persistent workbook" that stores all of the data that a CAD operator had previously entered. In addition, AutoCAD introduced the concept of a project, in which a CAD operator creates a "design script" for a whole-project design. The new project concept gave CAD operators the ability to work from
