## Magisk Root Granter V1.0 APK Free Download Fix

Download

Hey i rooted my phone with odin 4.2.2 and i installed the kernel and superuser. Everything was working fine but my apps are not getting updated after each and every update. Then i tried to use fastboot boot recovery: command fastboot boot recovery. Now the phone is not booting into the recovery after each and every boot which i always do for flashing the new rom's and updating the apps. I tried to boot into recovery but got stuck with a blank screen. By some googling i found out that this could be a problem of SuperUser access pop-up box which never appears and even selected "grant default access the new apps never gets the root access but apps which have root access gets the access when i reboot the phone. i have tried "adb kill-server" command and tried to connect back again after the phone reboots but it doesnt connect back with usb or wi-fi only in the internal network. Please help me if possible. I am using GNexus Gs3 Hello everyone I had rooted my phone sometime back and installed cwm and cm11 4.4.4 on my xperia spl tried to flash cm12 rom by bagyusz which was supposed to be for locked bootloader phones. Now the cm12 rom doesnt work properlyh and the mean time i guess this has locked my bootloader. i need to unlock my bootloader to move back to my previous rom cm11Plus mobile data doesnt work in this and it just shows that setup wizard has failed and my phone is idle.. cannot move from the screen and just can access the notification bar. please help me.
